

Instructions for Downloading GABI

1. Click on 'Download the Complete GABI Install Package'.
2. Select 'Save to Disk.'
3. Select the location you wish to save the files to. You may want to save it to your C:\ drive in the root directory.

Be patient. Downloading software from the Internet takes time.
4. Once the download is complete, use Windows Explorer or My Computer to find the files. There should be a file called GABIInstall.exe in that folder or in the root directory of your C drive.
5. Double click on the file and unzip to C:\GABIInstall. Then click on the unzip button.
6. Use Windows Explorer or My Computer to enter the C:\GABIInstall. In that folder, you should see another folder named Disk 1.
7. Open the Disk 1 folder and double-click on Setup.exe. (Note: There will be several files called Setup but only one is an executable. If you select View > Details, it is the one labeled 'Application.')
8. Installation will begin automatically. Use the defaults supplied by the program. (If you are installing to a LAN, see the manual for more detailed instructions.)
9. Once the installation is complete, you can open the program from your START button in the bottom left corner of your screen. Select START > Programs > GABI > GABI.
10. Check the website often. We are currently fixing minor bugs in the software and the most recent executable file (GABI.exe) will be posted. To update to the most recent version, download the GABI.exe and save to C:\GABI.
